

# MAGALIT

## Mosquito Control

**Magalit** is a biolarvicide water dispersible granules specially formulated to combat mosquito larvae in stagnant water.

**Magalit** Powered by *Bacillus thuringiensis* subsp. *israelensis* (Bti), Magalit is a highly effective and selective biological insecticide that targets a wide range of mosquito species, making it a versatile and eco-friendly solution for mosquito control.

**Magalit** effectively targets various mosquito species, including *Aedes*, *Culex*, *Culiseta*, *Anopheles*, Black flies, and Simuliidae family larvae in water, as well as *Phlebotomus* larvae and Fungus gnat larvae in humidity soil.

## Advantages

- **Selective Action:** Magalit's selective biological insecticide action ensures it specifically targets mosquito larvae, leaving non-target organisms unharmed, making it an environmentally friendly choice.
- **Flexible Application:** Magalit can be applied via ground or aerial spraying, providing flexibility to adapt to different mosquito control scenarios and water surface conditions.
- **Reduced Dependency:** By using Magalit, you can reduce your dependency on chemical pesticides, contributing to a more sustainable and eco-conscious approach to mosquito control.
- **Rapid Control Time:** Magalit provides rapid control, with visible results within 24-48

**Magalit** offers extended control of all *Aedes* species, and has been found to be effective against the following species:

**Culex** - *Culex obscurus*, *Culex axillicola*, *Culex bicki*, *Culex accelerans*, *Culex amazonensis*, *Culex lineata*

**Culiseta** - *Culiseta alaskaensis*, *Culiseta annulata*, *Culiseta impatiens*, *Culiseta inornata*, *Culiseta particeps*

**Anopheles** - *Anopheles gambiae*, *Anopheles apicimacula*, *Anopheles aztecus*, *Anopheles earlei*, *Anopheles fausti*, *Anopheles flumin*, etc.

**Black Flies (Family Simuliidae)** - Fungus gnats, Domestic flies
